## INTRODUCTION

This guide explains how to install, uninstall, and troubleshoot the Falcon sensor for Linux.

[Skip to main content](#)

## System Requirements

### Operating Systems

We support x86\_64 versions of these Linux server OSes. For specific kernel versions, see [Appendix A](#).

- Amazon Linux 2
- Amazon Linux AMI
  - 2018.03
  - 2017.09
  - 2017.03
- CentOS
  - 7.1 – 7.5
  - 6.7 – 6.10
- Red Hat Enterprise Linux (RHEL)
  - 7.1-7.5
  - 6.7-6.10
- SUSE Linux Enterprise
  - 12.1 – 12.3
  - 11.4 (*you must also install OpenSSL version 1.0.1e or greater*)
- Ubuntu
  - 16-AWS
  - 16.04 LTS
  - 14.04 LTS

We don't support Linux desktop OSes.

Docker is supported on RHEL 7, Ubuntu 14.04 and Ubuntu 16.04 with Falcon sensor for Linux 4.8.5305 and later. Docker is supported on CentOS 7 with Falcon sensor for Linux 4.11.5605 and later. No other operating systems or containers are currently supported.

Falcon on GovCloud is supported on Falcon sensor for Linux 4.5 and later.

### Networking Requirements

#### WHITELIST URLs

Depending on your network environment, you may need to whitelist SSL traffic to and from our cloud's network addresses.

- `ts01-b.cloudsink.net`
- `lfoup01-b.cloudsink.net`
- `lfodown01-b.cloudsink.net`

If you are a Falcon on GovCloud customer, you may need to whitelist SSL traffic to and from our cloud's network addresses. - `ts01-laggar-gcw.cloudsink.net` - `lfodown01-laggar-gcw.cloudsink.net`

If your network requires whitelisting by IP address instead of FQDN, see [Appendix B](#) for a list of IP addresses we use.

We use AWS for some communications between hosts and the CrowdStrike cloud.

#### AVOID INTERFERENCE WITH CERTIFICATE PINNING

The Falcon sensor uses certificate pinning to defend against man-in-the-middle attacks. Some network configurations, such as deep packet inspection, interfere with certificate validation.

[Skip to main content](#) :ket inspection (also called "HTTPS interception," "TLS interception," or "SSL inspection") or similar network configurations. Common sources of interference with certificate pinning include antivirus systems, firewalls, or proxies.

## Install the Falcon Sensor for Linux

1. Download the Falcon sensor installer from [Hosts > Sensor Downloads](#).
2. Copy your Customer ID Checksum (CID), displayed on [Sensor Downloads](#).
3. Run the installer, substituting `<installer_package>` with your installer's file name.

- **Ubuntu:**

```
sudo dpkg -i <installer_package>
```

- **RHEL, CentOS, Amazon Linux:**

```
sudo yum install <installer_package>
```

- **SLES:**

```
sudo zypper install <installer_package>
```

4. Set your CID on the sensor, substituting `<CID>` with your CID.

*This step is not required for versions 4.0 and earlier.*

- **All OSes:**

```
sudo /opt/CrowdStrike/falconctl -s --cid=<CID>
```

5. Start the sensor manually.

*This step is not required for versions 4.0 and earlier.*

- **Hosts with SysVinit :**

```
service falcon-sensor start
```

- **Hosts with Systemd :**

```
systemctl start falcon-sensor
```

6. Confirm the sensor is running.

- **All OSes:**

```
ps -e | grep falcon-sensor
```

You'll see output similar to this:

```
[root@centos6-installtest ~]# sudo ps -e | grep falcon-sensor
905 ?          00:00:02 falcon-sensor
```

### Optional: Prepare a Host as a Master Image

If you're preparing a host as a "master" device for cloning or virtualization, you must remove your "master" host's agent ID (AID).

Run this command after installing:

```
sudo /opt/CrowdStrike/falconctl -d -f --aid
```

When your cloned devices or virtual machines first contact the CrowdStrike cloud, they'll be automatically assigned a unique AID. If multiple devices use the same AID, the Falcon console will process all their events as though they came from a single device.

### Optional: Configure a Proxy

If your hosts use a proxy, configure the Falcon sensor to use it:

- **Configure proxy:**

```
sudo /opt/CrowdStrike/falconctl -s --aph=<proxy host> --app=<proxy port>
```

- **Confirm config:**

```
sudo /opt/CrowdStrike/falconctl -g --aph --app
```

- **Enable proxy:**

```
sudo /opt/CrowdStrike/falconctl -s --apd=FALSE
```

- **Disable proxy:**

```
sudo /opt/CrowdStrike/falconctl -s --apd=TRUE
```

## Uninstall the Falcon Sensor for Linux

Run these commands to uninstall the Falcon sensor from your host:

- **Ubuntu:**

```
sudo apt-get purge falcon-sensor
```

- **RHEL, CentOS, Amazon Linux:**

```
sudo yum remove falcon-sensor
```

- **SLES:**

```
sudo zypper remove falcon-sensor
```

## Troubleshooting Sensor Installation

### Installation Fails

#### ISSUE

Your sensor installation fails.

#### SOLUTION

Verify that the SHA256 checksum of the installer file you downloaded matches the SHA256 checksum shown in [Hosts > Downloads](#).

### Ubuntu Installation Fails: "Dependent Packages are not Installed"

#### ISSUE

Your Ubuntu installation fails with an error that "dependent packages are not installed."

#### SOLUTION

Use this command to install the dependent packages:

```
$ apt-get -f install
```

### SLES Installation Fails: "Nothing Provides Openssl"

#### ISSUE

Your SLES installation fails with an error that `nothing provides openssl1 >= 1.0.1`. This is most commonly caused by a SLES version that doesn't include a modern OpenSSL implementation.

#### SOLUTION

1. Enable the SLES 11 security module: `$ sudo zypper mr --enable SLE11-Security-Module`
2. Run the sensor installer again.

### Verify that Dependencies are Installed

#### ISSUE

Your installation fails with an error message about missing dependencies of `libssl`, `libc`, or `libcrypto`.

```
--> Missing Dependency: libssl.so.10()(64bit) is needed by package falcon-sensor-1.0.3-1.e16x86_64 (/falcon-sensor-1.0.3-1.e16.x86_64)
Error Missing Dependency: libc.so.6(GLIBC_2.7)(64bit) is needed by package falcon-sensor-1.0.3-1.e16x86_64 (/falcon-sensor-1.0.3-1.e16.x86_64)
Error Missing Dependency: libcrypto.so.10()(64bit) is needed by package falcon-sensor-1.0.3-1.e16x86_64 (/falcon-sensor-1.0.3-1.e16.x86_64)
```

#### SOLUTION

Install a [supported version](#) of OpenSSL.

## Troubleshooting General Sensor Issues

### Verify that the Sensor is Running

1. Check running processes to verify the Falcon sensor is running: `ps -e | grep -e falcon-sensor`
2. Check kernel modules to verify the Falcon sensor's kernel modules are running: `lsmod | grep falcon`
3. Check the Falcon sensor's configurable options: `sudo /opt/CrowdStrike/falconctl -g`

Optional parameters:

- `--aid` : the sensor's agent ID
- `--cid` : your Customer ID
- `--apd` : the sensor's proxy status (enabled or disabled)
- `--aph` : the sensor's proxy host
- `--app` : the sensor's proxy port

The sensor requires these runtime services:

- network
- systemd
  - local-fs
  - sysinit
  - multi-user
  - shutdown

### Verify the Sensor Files on Disk

If the sensor is not running, verify that the sensor's application files exist on your host:

```
$ sudo ls -al /opt/CrowdStrike /opt/CrowdStrike/falcon-sensor
```

This should be a symlink to either:

- the original sensor installation at `/opt/CrowdStrike/falcon-sensor`
- a sensor update package with a release build number, such as `/opt/CrowdStrike/falcon-sensor3000`

### Verify that the Sensor is Connected to the Cloud

There are two ways to verify that a sensor is connected to the CrowdStrike cloud:

- **Falcon console:** Search for the host in Hosts > Host Management. To view a complete list of newly installed sensors, use the [Sensor Report](#).
- **From the host:** Check network statistics using the command line: `sudo netstat -tapn | grep falcon`

If the Falcon sensor is communicating with the cloud, you'll see output like this:

```
tcp        0      0 192.0.2.176:35382    ec2-54-148-96-12:443
ESTABLISHED 3228/falcon-sensor
```

[Skip to main content](#)

## Sensor Logging

CrowdStrike support may ask you to provide sensor logs when troubleshooting an issue. Sensor logs are disabled by default because they can consume significant disk space. We recommend enabling sensor logs only when requested by CrowdStrike support.

- **Enable sensor logging:**

```
/opt/CrowdStrike/falconctl -s --feature=enableLog,disableLogBuffer --update
```

- **Disable sensor logging:**

```
/opt/CrowdStrike/falconctl -s --feature=none --update
```

Sensor logs are available for sensor version 3.0 and later. Find your sensor version with this command:

```
/opt/CrowdStrike/falconctl -g --version .
```

## Appendix A - Supported Kernels

Run the command `uname -r` from a host's command line to find its kernel version.

Falcon on GovCloud is supported on Falcon sensor for Linux 4.5 and later.

**Unsupported kernels:** For kernels not listed here, the sensor will run in a reduced functionality mode (RFM) until we update the Falcon sensor to support that kernel.
